

Project title: Raising Inclusion and Skills in Employment

Grant Agreement No: 021-2-NL02-KA210-YOU-000048493

Extract from the Online Theoretical Training Quality Evaluation Report

Held on 10th January 2023

Prepared by: AcrossLimits Ltd, Malta

5. Quality Evaluator's recommendations

After taking into consideration the weighting of each question, all the comments/suggestions made by participants and following discussions with Project Management, the Quality Evaluator recommends:

- Questionnaire accuracy due to time between event and sending out questionnaire – Although the response rate was 100%, the weightings were all 3.4 and higher, and only 1 participant submitted this comment, we still feel that this is a valid point. Participants at the next Training event to be held in Malta in March 2023 will be asked to fill in the online questionnaire at the end of this event.
- Online vs Face-to-face events – mentioned by 1 participant. Project Management opted for an Online event as:
 - The Covid19 situation in January 2023 could not be predicted;
 - The event would only be 2 hours long;
 - This was the only online event, with the other 2 being held face-to-face; and
 - Budget constraints.

We believe that the reasons to hold the training event online are acceptable.

- Attendance to Online event 13 out of 20. While all Dutch participants attended this event, only half of the Maltese and Spanish participants took part. Project Management mentioned the action that is being taken to ensure that all participants attend the Malta Training event. It was also suggested that, for future projects, participants are asked to sign an agreement that binds them to attend all events in a named project.

6. Conclusion

The aim of this Report is to determine the quality of the Project's online Theoretical Training event held on 10 January 2023. While the average weightings were high, all comments were discussed with Project Management. It has been agreed that a number of recommendations will be taken on board for future activities and projects.

Due to the above we believe that the quality of this Training event was of an acceptable level.
